

MySQL Built-in Functions

Data Transformation and formatting

Example Scenarios

I want to...

- ☒ Concat multiple fields to show them together
- ☒ Delete carts that are created 3 days ago, but was not ordered
- ☒ Take users if the email domain is 'mycompany.com'
- ☒ Show the number of days an application took to get approval
- ☒ Show a large number with comma at specific position (#,##,###)

The solution is...

Built in Functions

Built in Functions

What can they do?

Built in Functions

What can they do?

- ☑ Data Formatting
- ☑ String Manipulation
- ☑ Aggregation
- ☑ Various conversion
- ☑ Numeric Calculations
- ☑ Wide range of comparisons
- ☑ Encryption/Decryption
- ☑ Date and Time Processing

Built in Functions

Types of Functions

String Manipulation

`CONCAT()`, `SUBSTRING()`, `LENGTH()`, `REPLACE()`, `UPPER()`, `LOWER()`, ...

Numeric Calculations

`ROUND()`, `CEIL()`, `FLOOR()`, `ABS()`, `SQRT()`, ...

Date and Time

`NOW()`, `CURDATE()`, `CURTIME()`, `DATEDIFF()`, `DATE_ADD()`, `DATE_FORMAT()`, ...

Control Flow

`IF()`, `CASE`, `COALESCE()`, `IFNULL()`, ...

Cryptography

`MD5()`, `SHA1()`, `ENCRYPT()`, `AES_ENCRYPT()`, `AES_DECRYPT()`, ...

Built in Functions

String Manipulation

CHAR_LENGTH, LENGTH	The length of a string (in characters / bytes)
CONCAT, CONCAT_WS	Adds two or more expressions together. _WS will join them with a space
FORMAT	Formats a number to a format like "#,###,###.##"
INSTR	Returns the position of the first occurrence of a string in another string. 0 if not matched.
LOWER, UPPER,	Change case of text
SUBSTR, SUBSTRING_INDEX	Extracts a substring from a string
TRIM, LTRIM, RTRIM	Trim spaces from Left, Right or both side of string
RIGHT, LEFT	Extracts a number of characters from a string (starting from left or right)
LPAD, RPAD	Right/Left-pads a string with another string, to a certain length
REPLACE	Replaces all occurrences of a substring in a string

Built in Functions

String Manipulation

— Get email domain of users

```
SELECT id, CONCAT(first_name, ' ', last_name) AS full_name  
  
FROM users;
```

— Get email domain of users

```
SELECT id, name, SUBSTRING(email, INSTR(email, '@') + 1) AS email_domain  
  
FROM users;
```

— Get email domain of users

```
SELECT id, title,  
       LEFT(description, 100) AS excerpt,  
       LOWER(REPLACE(product_name, ' ', '-')) AS url_slug  
  
FROM products;
```

Built in Functions

Numeric Calculations

ROUND, FLOOR, CEILING	Round a number with specified strategy
MAX, MIN	Get Min, Max of a given column/group
SUM	Get sum of a given column/group
COUNT	Count total records of a a given column/group
RAND	Returns a random number (between 0 and exclusive)
POWER, SQRT	Returns the value of a number raised to the power of another number (2 for SQRT).
AVG	Returns the average of a column/group
DIV, MOD	Returns the division/remainder of 2 numbers
SIN, COS, TAN, COT	Returns the sine, cosine, tangent, cotangent of numbers
ASIN, ATAN, ATAN2, ACOS	Returns the arc sine, cosine, tangent of numbers

Built in Functions

Numeric Calculations

— Getting total price by items of an order

```
SELECT product_code, unit_price, qty, ROUND(unit_price * qty, 2) AS item_total  
FROM orderd_items  
WHERE order_id = 10105;
```

— Count number of records, optionally with filters

```
SELECT COUNT(*)  
FROM users WHERE role = 'admin';
```

— Change 1 out of 3 users to a teacher

```
UPDATE users  
    SET role = 'teacher'  
WHERE MOD(id, 3) = 0;
```

Built in Functions

Date and Time

CURRENT_DATE, CURRENT_TIME	Get current Date/Time
DATE_ADD, DATE_SUB	Add, remove datetime interval
DATEDIFF, TIMEDIFF	Getting difference of date (days) / time (HH:mm:ss)
DATE_FORMAT, TIME_FORMAT	Formatting Date/Time
MAKEDATE, MAKETIME	Make date/time by providing necessary input
NOW	Returns the current date and time
STR_TO_DATE	Returns a date based on a string and a format
TO_DAYS, TIME_TO_SEC, SEC_TO_TIME, ...	Various unit conversion functions
EXTRACT, HOUR, MONTH, MINUTE, MICROSECOND, ...	Various extraction functions to get s part of a date

Built in Functions

Date and Time

— Getting orders where shipment was delayed above 3 days

```
SELECT id, order_date, shipped_date, DATEDIFF(shipped_date, order_date) AS delay
FROM orders
WHERE delay > 3;
```

— Get payments with future check date

```
SELECT check_number, amount
FROM payments
WHERE payment_date > CURDATE();
```

Built in Functions

Control Flow

IF()	If / Else construct
CASE	Case Operator (with WHEN-THEN-ELSE)
IFNULL()	If / Else construct based on NULL or not
NULLIF()	Return NULL if expr1 = expr2

Control Flow

— Display customer type based on credit limit

```
SELECT id, name,  
       CASE  
         WHEN credit_limit > 1000 THEN 'Premium'  
         WHEN credit_limit > 500  THEN 'Standard'  
         ELSE 'New'  
       END AS customer_type  
FROM customers;
```

— Get discount eligibility based on current stock

```
SELECT product_id, IF(stock_qty > 50, 'Eligible', 'Not Eligible') AS discount  
FROM products;
```

Built in Functions

Cryptography / Hashing

MD5()

Round a number with specified strategy

SHA(), SHA1(), SHA2()

Calculate an SHA-1 (160-bit), SHA-1, and SHA-2 checksum

AES_ENCRYPT(), AES_DECRYPT()

Encrypt/Decrypt string with a same key

CRC32()

Compute a cyclic redundancy check value (Math Function)

Built in Functions

Cryptography / Hashing

— Save user password with MD5 encryption

```
INSERT INTO users (username, password)
VALUES ('goodboy', MD5('the-secret-password'));
```

— Sign document update version with SHA1 encryption

```
UPDATE documents
SET content_hash = SHA1(CONCAT(content, username, salt));
```

— Encrypt and Decrypt with AES encryption

```
UPDATE customers
SET credit_card_info = AES_ENCRYPT('the-card-number', 'encryptionkey');

SELECT customer_id, AES_DECRYPT(credit_card_info, 'encryptionkey') AS card_info
FROM customers;
```
